

Case Study: IT Capability Roadmaps

The Challenge

To enhance and transform the institutional IT infrastructure of Goddard Space Flight Center (GSFC).

The initiative responded to the needs of the NASA Missions, Programs, and projects, Center-specific priorities, Agency IT strategy, as well as Federal Mandates. The GSFC CIO and Center EA selected **Information Dynamics** to provide the thought leadership needed to accomplish this project.

Our Approach

INFORMATION DYNAMICS

The model produced by **Information Dynamics** will guide GSFC in their institutional IT transition planning and service provisioning. This model is a repeatable process which can be applied to other NASA Centers. Our model involved developing an outlook of GSFC and Agency priorities over the next 7 years and devising specific transition and sequencing plans for each GSFC IT capability.

Outcomes

The results of our efforts provided the GSFC CIO with an implementation pathway to achieve its strategic objectives:

- Goals and priorities
- Options and alternatives
- Technology strategy
- A portfolio of IT capabilities which meet the GSFC science and engineering requirements and are responsive to Agency priorities
